

Application

New distribution boards ROS are available in multiple configurations. They can be fitted with 1- or 3-phase overcurrent circuit breakers, a power switch, a reversing switch or various sockets. Distribution boards ROS have new design and they are manufactured using the latest technologies.

Design

Numeric characters in the names of the distribution boards, e.g. ROS 5; ROS 7 i ROS 11 represent the maximum number of single (1-phase) modules which can be installed in the board. Construction parts of the distribution boards (covers, base, etc.) were made of grey, thermoplastic ABS, which can be recycled.
