

Mounting brackets for mounting the NEPTUN switchgear

Ordering code

NAB

Product description

A secure fastening is a basic requirement for the NEPTUN line. For this reason, we offer reliable mounting brackets as an option in our range of accessories. External mounting can be upwards or sideways. After mounting with the NAB holder, Neptun can be used for rated insulation voltages of AC 1000V and DC 1500V, which allows use in photovoltaic systems with higher voltage.
